

Temperature Sensor

Thermocouple

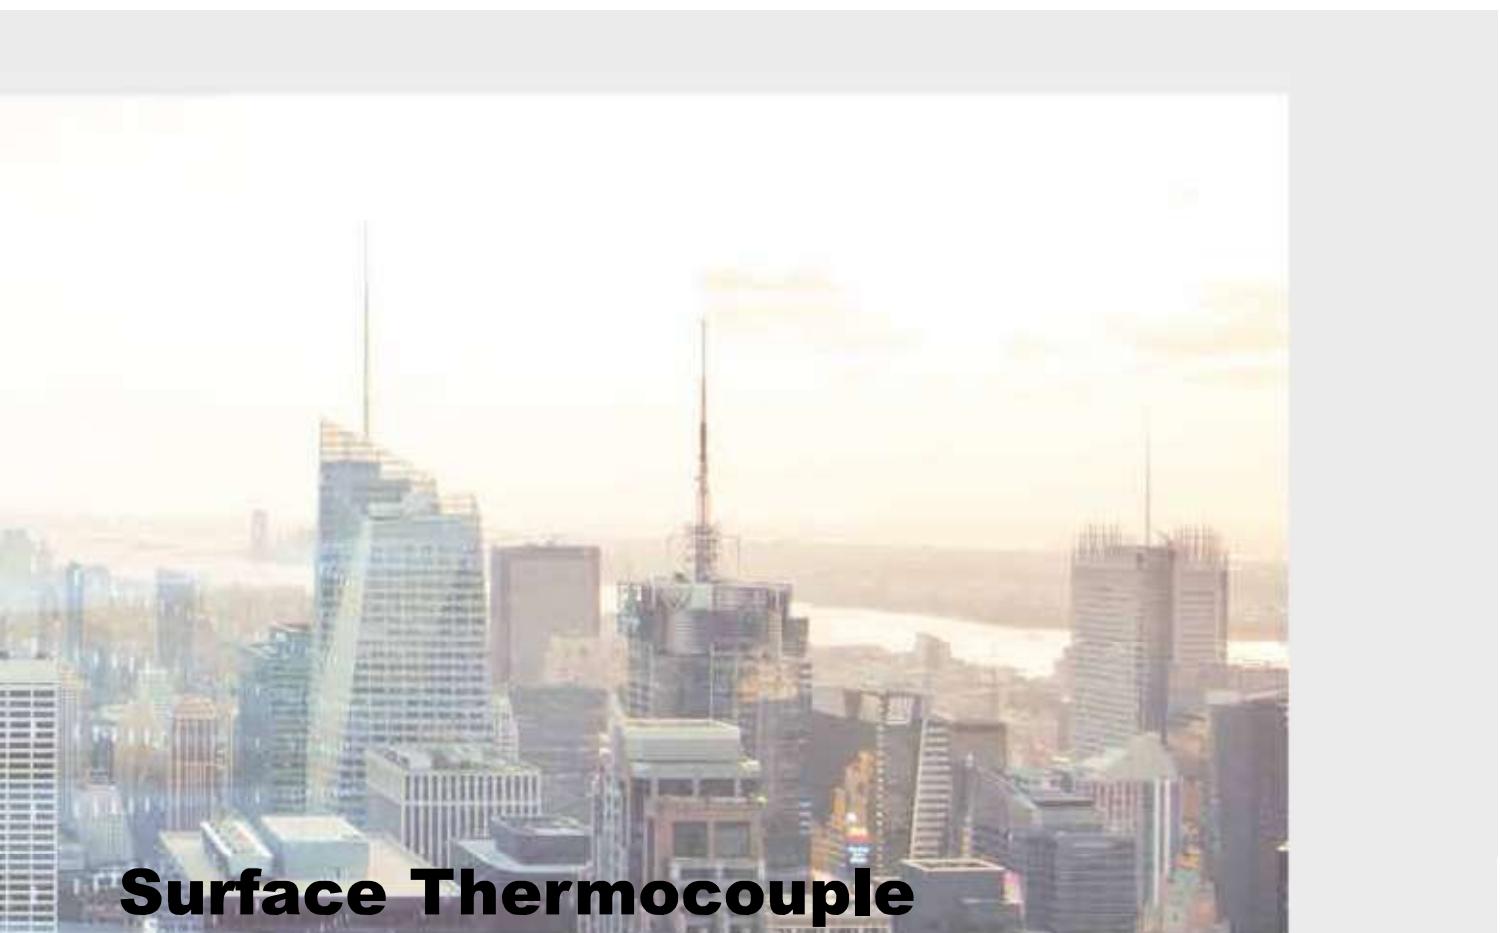

Thermocouples are used in industry for measuring the temperature of gases, liquids or solid surfaces etc., Its usually assembled with indicators, recorders or computers.

A thermocouple consists of two dissimilar metals joined together at one end. When the junction of the two metals be cooled or heated and a voltage is produced that can be correlated back to the temperature.

Hongtai company providing thermocouples are manufactured in different combinations of metals. The calibrations are K, N, E,J, T, S, R, B. Each calibration has a different temperature range.

Temp Range

	Type	Temp Range	Type	Temp Range
Thermocouple	B: PtRh30-Pt6	0~1600 °C	K: NiCr-NiSi	0~1300 °C
	R: PtRh13-Pt	0~1600 °C	E: NiCr-CuNi	0~600 °C
	S: PtRh10-Pt	0~1600 °C	J: Fe-CuNi	0~500 °C
	N: NiCrSi-NiSi	0~1300 °C	T: Cu-CuNi	0~350 °C
Thermal Resistor	PT10	-200~+650 °C	PT100	-200~+650 °C
	PT1000	-200~+650 °C	CU50	-50~150 °C
